

Co-production Guidance

Coproduction = Working Together

If we all work together we can have better health and care services

How we work together

1

As equals

2

We listen & respect

&

3

We share & benefit

&

How will this benefit me?

When we work together well and share information...

You are **involved** in issues concerning you

People will **listen** to what you have to say

Better **understanding** about your needs, wants and wishes

You can help find **solutions**

You will have more **information**

You are **not alone**

How will we achieve 'Working Together Well'?

The 9 Principles

1

Work with the people who use services: *People who use or work in a service improve it together*

2

All voices should be heard (especially *people who use a service and front line staff*)

3

Hear from those with lived experiences and support them to tell their story

4

Make sure there are benefits to those involved in 'working together' activities

The 9 Principles continued

5

Go to *individuals or communities* to engage with them

6

Work flexibility so *everyone can help*

7

Avoid jargon, give the right information at the right time

8

Build long term relationships with *individuals and communities*

9

Enough funding for 'working together' activities to take place

If you would like more information or want to get involved
